Diseases

1. Myositis

- ❖ Myositis is a type of **muscle inflammation**. The body's immune system attacks the muscle cells and destroys them, called myositis.
- ❖ This muscle inflammation can affect both men and women. Even more so, women in particular are slightly more likely to come. It is called Idiopathic Inflammatory Myositis (IIM) in the medical field.
- ❖ **Types of myositis:-**
 - Inflammatory muscle disease with skin involvement (**dermatomyositis**).
 - Cutaneous benign muscle inflammatory disease (**polymyositis**).
- ❖ **The reason:-**
 - The medical world is still unable to determine the exact cause of myositis.
 - It could be caused by some sort of viral infection, although that could not be confirmed.
 - The disease is widespread throughout the world. Especially, the impact is more during **cold and rainy season**.
- ❖ **Impact:-**
 - In the body, it is natural for old muscle tissue to die and new tissue to form. In patients with myositis, the immune response causes muscle inflammation and cell destruction.
 - If this is not observed, normal life will be blocked. There is also a possibility that muscle cells may be permanently destroyed.
 - Normally, the alimentary canal should be opened and the respiratory tract should be closed while eating.
 - When the muscle is weak due to myositis, food is more likely to go up into the respiratory tract.
 - If this happens, aspiration pneumonia may occur. It can be fatal at some point. Apart from this, people with dermatomyositis may rarely develop cancer.
- ❖ **Symptoms:-**
 - fever; Physical fatigue; loss of appetite; swelling in the muscles; Difficulty in getting out of bed, sitting up, walking; Difficulty in swallowing food, drinking water.

- cough; shortness of breath; difficulty speaking; voice change; red rash on the skin; red rash on the breast; Pain in the muscles;

❖ **Impact rate:-**

- 22 out of 1 lakh can come
